

FACTORYMANAGER for Exact Macola

Be smart and connect your factory...

Production machinery and resources generate vast quantities of data on an ongoing basis. Capturing this data and organizing it in such a way that it can be used to increase output and reduce costs is a major challenge for manufacturers.

Factory Manager is an online document, tracking and analysis solution, helping manufacturers to improve their performance and reduce firefighting. It enables you to create a truly paperless shop floor by allowing the online attachment of documents, videos, forms and sign off records, with full archive functionality for audit purposes.

Factory Manager also allows you to record and monitor issues such as machine downtime, calibration, tooling problems, employee leave and accidents, so you can evaluate recurrent issues, reduce downtime and create workflows to prevent future incidents. It helps you to capture feeds from your machines, software and personnel and share important metrics with your team, from anywhere, at any-time and on any device.

Loading, Availability, Performance and Quality measurements are passed to Factory Manager from the Planning and Workforce modules. With this information you are able to easily understand your overall equipment effectiveness (OEE) and total effective equipment performance (TEEP). Six big loss analysis identifies opportunities to eliminate waste from your processes supporting follow on lean and Six Sigma initiatives.

"Factory Manager is an innovative and intelligent analysis tool, helping you monitor your factory from every angle."

Helping manufacturers compete in today's market

FACTS

Integration

Factory Manager fully integrates with your Exact Macola package, Planning Manager and Workforce Manager to provide you with a 360 view of your production. Factory Manager uses analytical data from Workforce and Planning Manager to help you achieve unparalleled efficiencies in your operation ultimately saving you costs, and increasing your output.

Factory Manager is one of LYNQ's 3 innovative solutions, that work together seamlessly to help you compete in today's market.

What you get

- Eliminate paper from the shop floor
- Measure and minimize downtime
- Increase factory output
- Outperform your competitors

Features

Paperless Shop Floor	Issue Tracking & Workflow	Factory Performance Analysis
• Attach Documents	• Breakdowns	• Six Big Losses
• Attach Instructional Videos	• Setup & Adjustments	• Loading
• Online Form Submission (custom)	• Minor Stops	• Availability
• In Process Results	• Reduce Speed	• Performance
• Quality Control Results	• Start-up Rejects	• Quality
• Sign Off	• Production Rejects	• Overall Equipment Effectiveness (OEE)
• Archive (for auditing)	• Health & Safety	• Total Effective Equipment Performance
